### FIV Positive Cat Facts

Cats who test positive for Feline Immunodeficiency Virus are often euthanized or are considered Unadoptable. **In fact, cats who test positive for FIV usually live long, healthy lives and do not infect other household pets!**

**FIV is mainly passed from cat to cat through deep bite wounds**, the kind that usually occur outdoors during aggressive fights and territorial disputes.

A cat **CANNOT** pass on FIV by living with other cats, sharing water bowls or cleaning each other.

**FIV cats do not become ill and die at an early age.** FIV+ do not have a higher incidence of illness and live the same lifespan as non FIV+ cats. Multiple medical studies show that cats who test positive for FIV live just as long as FIV- negative cats.

**“FIV itself does not cause severe clinical signs and FIV Infected cats live many years without any health problems.” - Hartman, Veterinary Immunology and Immunopathology, 2011.**

**Please consider adopting an FIV+ cat!**
